

BOT CHAIN NATIVE

LuckyProof

Random selection, verifiably fair.

A transparent community draw platform for giveaways, events, campaigns, and free raffles with verifiable winner selection.

The Problem

02

Community giveaways and draws often rely on selection methods participants cannot independently verify.

- **Trust in organizers**

Participants usually have to trust that winners were selected fairly.

- **Opaque selection**

Manual or off-chain random selection can be difficult for communities to verify.

- **Scattered participation**

Registration, participant lists, and winner announcements often happen across different tools.

- **Weak proof**

After a draw ends, there may be no permanent record showing the participants, result, and selection event.

The Solution

03

LuckyProof makes free community draws transparent, simple, and verifiable.

Create

Organizers create a draw with details, deadline, and eligibility rules.

Join

Participants register their wallets before the draw closes.

Select

A winner is selected through a verifiable randomness mechanism.

Verify

Anyone can inspect the participant set, result, and on-chain winner record.

Core Features

04

A lightweight experience for transparent, non-financial community draws.

Draw creation

Set title, description, registration window, and draw deadline.

Wallet registration

Build a transparent participant list using wallet-based entries.

Verifiable randomness

Use a secure randomness integration or abstraction for winner selection.

Winner records

Store the selected winner and draw result for public verification.

Draw history

View previous draws, participant counts, and results.

Shareable pages

Give organizers a simple public page for registration and verification.

Who It Is For

05

LuckyProof is designed for communities that need transparent winner selection.

Web3 Communities

Run transparent giveaways and community reward selections.

DAOs & Projects

Select participants or winners for free ecosystem campaigns.

Event Organizers

Run attendee draws, community activities, and event giveaways.

Creators & Brands

Give audiences a verifiable way to participate in promotional draws.

Why BOT Chain

06

LuckyProof turns transparent community engagement into a practical on-chain use case.

- **Verifiable records**

Participant registration and winner results can be recorded transparently on-chain.

- **Community utility**

Projects can use LuckyProof for giveaways, events, campaigns, and engagement activities.

- **Wallet-native participation**

Users can participate using the wallets they already use across the ecosystem.

- **Reusable infrastructure**

Communities can run multiple draws without rebuilding registration and verification workflows.

Current Status & Roadmap

07

Focused on validating registration and verifiable winner selection on BOT Chain Testnet.

01

MVP

Draw creation, participant registration, winner selection, and verification.

02

Testnet

Deploy contracts and validate complete draw flows on BOT Chain Testnet.

03

Refine

Improve randomness integration, verification pages, history, and user experience.

04

Adoption

Onboard communities, projects, creators, and event organizers.

What We Want From BOT Chain

08

Ecosystem support can help LuckyProof reach communities that need transparent draws.

- 1 Showcase LuckyProof across BOT Chain's official social media channels.
- 2 Feature LuckyProof on the BOT Chain website and ecosystem/project directory.
- 3 Connect LuckyProof with projects, DAOs, event organizers, creators, and communities in the ecosystem.
- 4 Amplify LuckyProof's testnet launch, community draws, product updates, and key milestones.
- 5 Collaborate on community campaigns, giveaways, event activations, and ecosystem initiatives using LuckyProof for verifiable winner selection.

LuckyProof

Random selection, verifiably fair.

Transparent community draws with wallet-based participation and publicly verifiable winner selection on BOT Chain.
